

Iran War Energy Market Impact Analysis Dashboard

Interactive Streamlit Dashboard Project

Analyzing the impact of geopolitical conflict on oil, gas prices, and shipping activity.

Project Objective

Analyze how the Iran War affected Brent, WTI, and Dubai crude oil prices, U.S. gasoline prices, and Strait of Hormuz shipping activity using an interactive Streamlit dashboard.

Dashboard Features

- KPI Cards
- Oil Price Timeline
- Gas Price Analysis
- War Phase Analysis
- Correlation Heatmap
- Key Events Timeline
- Interactive Filters

Technologies Used

Python, Pandas, Plotly, Streamlit, NumPy, Data Visualization

Key Insights

- Oil prices increased during conflict periods.
- Gasoline prices rose across regions.
- Shipping activity changed after the war began.
- Strong relationships can be observed between energy markets and logistics activity.

Future Enhancements

- Real-time API integration
- Machine Learning forecasting
- Automated PDF reporting
- Advanced geopolitical risk indicators
- Predictive analytics for energy markets
